Protect data and eliminate phishing attacks with Galaxkey and Yoti

Do you want 100% confidence that the emails and files you send are received and opened only by the intended person?

A Galaxkey-Yoti integration gives you an unrivalled combination of ultra-secure emails and real-time digital identification.

Banks and other institutions need ironclad data protection to keep financial and other sensitive data from entering the wrong hands. Accurately identifying individuals at each point of contact – **know your customer (KYC)** – is crucial to preventing fraud and financial crime.

Yoti's digital ID with biometric authentication gives you dynamic KYC. Combined with Galaxkey's banking-grade encryption to protect your emails and files, you no longer have to worry about data being stolen in phishing attacks. Performing significant financial transactions is easier and safer with sender verification and secure transaction records.

INTEGRATED DATA SECURITY AND DYNAMIC IDENTITY
VALIDATION PROTECTS YOU AND YOUR CUSTOMERS

D10

A GALAXKEY-YOTI INTEGRATION
GIVES YOU:

Unbeatable data security – all your files and emails protected, with a quick, single sign-on.

Real-time identity verification so your emails and data cannot fall into the wrong hands.

Secure transaction records – safely send and accurately record even the largest financial transactions, with sender verification and automatic logging.

World-class regulatory compliance – with KYC, data protection, and anti-money laundering regulations.

How Yoti helps organisations
verify they’re talking to the
right person

Yoti is the new way for individuals to prove their identity. Individuals can encrypt their ID and use this digital ID for fast validation when accessing a wide range of services and systems.

For businesses, Yoti allows you to identify, authenticate, and verify your customers, staff, or third parties you need to communicate with. Yoti guarantees 100% verified users. Users with a Yoti digital ID have passed:

-  **LIVENESS DETECTION**
with robust, anti-spoofing liveness test
-  **DOCUMENT CHECK**
combining OCR scanning, NCR chip reading, and expert checking
-  **BIOMETRIC FACE MATCH**
combining technology and human expertise

Yoti is convenient for individuals because it enables them to quickly and securely confirm their identity in many different situations, while knowing their data is always safe. Yoti uses PKI technology, guaranteeing a user’s data can only be accessed by that user. Over 9 million people have already downloaded the Yoti app.

HOW GALAXKEY HELPS ORGANISATIONS PROTECT SENSITIVE DATA WITH ENCRYPTION

D10

Galaxkey's three layer encryption architecture offers world-class data protection for your emails, documents and workspaces.

Passwords aren't stored in any format, and Galaxkey is the only platform that allows you complete control of your encryption keys. So you can rest assured knowing that your data is being protected to the highest level. Galaxkey's user-friendly products secure and protect your data both in transit and at rest.

Secure your emails:

Protect all your emails, including attachments, with our easy-to-use, robust email encryption. It's CPA certified by the UK's National Cyber Security Centre.

Collaborate securely:

Work with colleagues and external teams to edit, share and save sensitive information within the protection of our secure workspace.

Secure your documents:

Safeguard your confidential data when using, sharing or storing files, with our file encryption for files of all types and sizes.

Sign documents digitally:

Save time, effort and paper by using secure electronic signatures for confidential or legal documents.

KNOW YOUR CUSTOMER, CONTROL YOUR DATA WITH GALAXKEY AND YOTI

D10

Ideal for organisations needing bulletproof customer identification and data management, a Galaxkey-Yoti integration is the latest weapon in preventing financial crime and fraud.

Yoti integrates seamlessly into Galaxkey's ecosystem so your staff don't have to wrestle with separate log-ins and managing different software.

Installing Galaxkey and Yoti together gives you:

Confidence your emails and files are opened by the right person only

Each time you send an email or file to a customer or third party, they will need to confirm their identity with Yoti before they can open it. Confidential data is kept safe from prying eyes.

Customers' trust in your messages and data security

Yoti's sender verification plus Galaxkey's encryption reassures your customers that all messages they receive from your company are both authentic and secure. They'll know not to trust any messages supposedly from you but without a verified Yoti sender stamp, which could be phishing emails.

Strong yet flexible control of internal file access

You can choose security settings for internal communications and file access. By using Yoti to authenticate individual staff members wishing to access specific documents or folders, you can control who has access to which data.

Secure recording and auditing of all transactions

Each time a file is accessed, edited, or shared, this is automatically logged in a secure record. So you can trace and prove every single transaction that occurs – whether you're providing proof of sending a large financial transaction, or checking back on a specific issue arising.

Demonstrated compliance with industry regulations and best practice

Fulfil your data protection and industry regulation compliance obligations with Galaxkey and Yoti – including KYC, AML, GDPR, and PEPs and Sanctions checks.

KNOW YOUR CUSTOMER, CONTROL YOUR DATA WITH GALAXKEY AND YOTI

D10

Installing and using Galaxkey and Yoti

Quick deployment and minimal training

Galaxkey with Yoti integration offers easy, out-of-the-box set-up, whichever operating system you work on. With a Windows feel, our platform is intuitive to use and learn.

Military-grade data protection through encryption standards

Galaxkey complies with AES FIPS 140-2 encryption protocols. It utilises both public AES256 and private 2048-bit RSA Keys as a standard. Put simply – it gives your data military-grade protection.

Flexible solutions to suit your existing work set-up

With Galaxkey available in on-premises, cloud and hybrid solutions, there's an option for all work environments. So you can continue to work as you choose.

One-click security, integrated with all major operating systems

Galaxkey integrates smoothly with existing email clients and all major operating systems. It gives you one-click security to share information securely straight from Microsoft Outlook, iOS, Android Windows, and Mac.
