How does your business receive large files from your customers?

The two main options are by post or through a third-party cloud storage service such as Dropbox. When the data to be sent is sensitive – and all business data must be classified as such to comply with GDPR – neither of these methods are secure enough.

Complete peace of mind for receiving business files securely Galaxkey Secure Workspace solves this problem by allowing users to upload and share files and folders securely.

When you need to receive files from people outside of your organisation, Secure Workspace offers the Secure Delivery Service (SDS) feature. SDS lets your business customers send you files securely, at no extra cost, and with no need for them to register with Galaxkey.
SECURE DELIVERY SERVICE
KEY FEATURES

EASY TO USE
SDS is easy to set up and configure for businesses and makes the process of sending large files simple for your customers. All you have to do is share your secure SDS link with the person sending the files.

100% PRIVATE
Files are sent directly into your business’s internal workspace without any intervention and monitoring by anyone else, including Galaxkey. Both the sender and the recipient are informed when the files are delivered successfully.

MALWARE DETECTION BUILT-IN
Uploaded files are automatically scanned for malware to prevent viruses entering your business system.

END-TO-END ENCRYPTION
Uploaded files are encrypted and secured in the Secure Workspace of the recipient with user identity by default. No unsecured files are ever stored and files cannot be accessed without the correct user authentication.

VERIFICATION REQUIRED
An automated verification code is sent to the sender’s email address that must be entered before the files can be sent. This ensures bots cannot be used. The recipient’s email address is also validated to ensure they are configured in the corporate environment.
CUSTOMISABLE

Users can add a customised message and choose the maximum file size and number of attachments that can be uploaded. Businesses can also add optional disclaimer text.

GDPR COMPLIANT

Galaxkey Secure Workspace is fully compliant with GDPR and other international regulatory requirements.

ACCESSIBLE BY DESIGN

SDS is WCAG 2.0 (Web Content Accessibility Guidelines) compliant for accessibility and uses CAPTCHA with sound for further accessibility.
